

Dear Customer

Thank you for your purchase. We want to ensure that you & your baby has the very best experience with your ride-on car.

To this end we have upgraded the batteries of the car, replaced usual chargers with a faster one that has a Red & Green LED light to indicate that it is actively charging. The instructions below are for the various models and have been tested on all our ride-on cars.

1. After assembling the car, please play with it until the battery runs out **completely** (there may be some residual charge from factory testing) If the battery is already flat you may start charging.
2. For the continued longevity of your toy car, the battery needs to be charged at least 2 hours on 1<sup>st</sup> charge.
3. The battery needs to run down **completely** before putting the car back on charge again.
4. The battery must be **charged fully** before unplugging the charger; this usually takes about 2 hours. The LED may go green **before** fully charged, please continue charging for at least 2 hours to ensure it is fully charged.
5. Do **not** charge longer than 2 hours as you may cause irreparable damage to the battery.
6. The car will **NOT** switch on when the charger cable is in the charging port. Please remove the charger **before** pressing the start button.
7. Please note that batteries are **consumables and are not included in the warranty of the ride-on**. However, if your battery should fail within 3 months we will exchange it free of charge (excluding shipping cost) Please contact [warranties@micropointsa.co.za](mailto:warranties@micropointsa.co.za) to facilitate this exchange
